## Start the Test

- 3. Remove card from pouch and turn so blue arrow is facing upwards
- 4. Using both thumbs firmly slide card into the Reader in a smooth continuous motion until it clicks into place, calibration will commence- duration 170 secs. If the card is not inserted correctly 'Unable to read barcode' will display. In this case remove the card and insert again
- 5. Using the tabs enter patient ID, species (required) & additional patient information
- Take venous or arterial whole blood sample from patient- minimum 100µl\*. Arterial sample required for accurate PO<sub>2</sub> & sO<sub>2</sub> results (\*alternatively take blood sample prior to point 4 if preferred)
- When EPOC displays 'Calibration Finished. Insert Sample...' introduce sample within 7 ½ minutes
- 8. Hold syringe barrel vertically
- 9. Place syringe into blood sample entry port and rotate 1/4 turn to secure
- 10. Steadily depress syringe plunger in a single smooth continuous motion until audible beep sounds
- 11. Read results in 30 seconds. To print, select

12. Remove card and discard in clinical waste
