

# Microman E Pipette 100 – 1000ul

Available for hire or purchase for your clinical trial.

## Overview

Microman E pipette is the ideal solution to improve accuracy and precision when pipetting hot or cold liquids and is also ideal for pipetting viscous and dense samples.

The pipette works like a syringe and capillary pistons eliminate the air cushion between the sample and the disposable piston, providing 100% protection against pipette contamination and producing accurate, reproducible, and precise results every time.

The clip fitting system allows for a capillary piston to fit on to Microman E as simply as fitting a standard tip to a standard pipette.

## Operating Feature

- The volume securing button allows for easy volume adjustment and minimizes the risk of accidentally changing the volume during pipetting cycles
- The Microman E pipette is comfortable and easy to use
- The shape of the handle, with an added finger hook, rests comfortably in your hand
- Fully visible volumeter on the front of the pipette so that the volume can be seen while pipetting
- A large push button allows you to aspirate and dispense with ease

## Specification

- |                          |          |       |           |
|--------------------------|----------|-------|-----------|
| • Volume (µL):           | Min. 100 | 500   | Max. 1000 |
| • Systematic Error (µL): | ± 3      | ± 5   | ± 8       |
| • Random Error (µL):     | ≤ 1.6    | ≤ 2.5 | ≤ 4       |
